Ripple Effects

The 2011 Kansas Housing Markets Forecast marks the eighth straight year we have forecasted area housing market activity. With all of the economic turmoil over the past several years – not to mention the huge impact of the home buyer tax credit program – it has never been so difficult to track the underlying current of the market. That's why we titled this year's forecast "Ripple Effects."

We hope you find the Kansas Housing Markets Forecast useful as you prepare for the coming year.

Dr. Stanley D. Longhofer
 Director, WSU Center for Real Estate
